SUMMARY

Computer Science Engineering student specializing in Full Stack Development, Artificial Intelligence, and Machine Learning. Experienced in designing and developing scalable web and mobile applications using React.js, FastAPI, Node.js, PostgreSQL, and modern software engineering practices. Built AI-powered solutions, real-time collaboration systems, and location-based workforce management platforms. Passionate about combining technology with creativity through automotive design and 3D modeling. Strong problem solver with a persistent approach toward experimentation, rapid learning, and adapting to new technologies.

EDUCATION

Institute of Technical Education and Research, SOA University

B.Tech in Computer Science and Engineering
Bhubaneswar, Odisha

2023 - 2027
CGPA: 7.86 / 10.00

Oxford Public School
Ranchi, Jharkhand

2022 - 2023
Percentage: 71.83%

Guru Gobind Singh Public School
Daltonganj, Jharkhand

2020 - 2021
Percentage: 91.2%

PROJECTS

AgriRoots - Crop Information Platform

- Developed a full-stack agriculture platform using React.js, FastAPI, and PostgreSQL, integrating crop solutions, disease information, market insights, and equipment services.
- Designed more than 10 REST API endpoints for handling agricultural data and user interactions.
- Implemented responsive UI components improving accessibility across desktop and mobile devices.
- Integrated data-driven recommendations to assist farmers with crop-related decisions.

SurePay - SaaS

- Built an AI-powered Parametric Insurance Platform using FastAPI and PostgreSQL to handle real-time insurance data processing.
- Designed a decoupled microservices-based architecture improving modularity and deployment efficiency.
- Implemented GPS spoofing detection using sensor-fusion techniques to reduce fraud risks.
- Containerized the application using Docker for consistent and reliable deployment.

SiteSync - Geo-Fenced Remote Workforce Management System

- Built a mobile and web workforce management platform using React Native, Node.js, Express.js, and MongoDB for location-based employee attendance.
- Implemented GPS-based geofencing validation with 30-second real-time location updates for accurate workforce tracking.
- Developed 10+ REST APIs and integrated location services for managing users, work sites, and active work sessions.
- Designed a scalable full-stack architecture with authentication, session management, and automated attendance verification.

SKILLS

Programming Languages :

Java, C, C++, Python, JavaScript, SQL

Backend :

Node.js, FastAPI, REST APIs, JWT Authentication

Databases :

PostgreSQL, MySQL, MongoDB, Database Design

Tools :

Git, GitHub, Docker, Postman, VS Code, Jupyter Notebook, Blender

CERTIFICATIONS

- [Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate](#)
- (Oracle University)
- [Front End Web Developer Certification](#)
- (Infosys Springboard)

TRAINING / COURSES

- OOP Concept
- Data Structures and Algorithms
- Database Management System
- Computer Networks
- Machine Learning & Artificial Intelligence

KEY ACHIEVEMENTS

[Guidewire DEVTrails University Hackathon 2026](#)

Collaborated with a team project to design and pitch an AI-powered InsurTech solution for the gig economy.

INTERESTS

3D Visualization, Automotive Concept Design, Blender

SOFT SKILLS

- Team Collaboration
- Adaptability
- Analytical Thinking
